Sony Expands Imaging Eco-system with Launch of New Camera Remote Software Development Kit

Empowers Developers and Integrators to produce new imaging experiences

Sony today released a new camera software development kit (Camera Remote SDK) that offers opportunities for developers and integrators to access Sony's cameras and image data captured with them. The support for developers and integrators has been highly reinforced from the current [Camera Remote API](#) and allows developers and integrators to design bespoke applications to remotely control Sony cameras for tailored usage requirements. The applications provide remote control functions from a host PC and facilitate transmission of the image data back from the Sony cameras.

In addition, The Camera Remote SDK allows developers and integrators to remotely access other functions such as changing the camera settings, shutter release and live view monitoring in their software applications.

The Camera Remote SDK initially supports [Alpha 7R IV](#) and [Alpha 9 II](#) and the line-up of supported Cameras will be gradually expanded hereafter[[i](#)].

The Camera Remote SDK is available now and can be downloaded from [here](#).

The current Camera Remote API's provision will be closed following this new release of the new Camera Remote SDK and its support will be terminated [\[ii\]](#).

For more information, please contact the digital imaging team on sonydi@hopeandglorypr.com

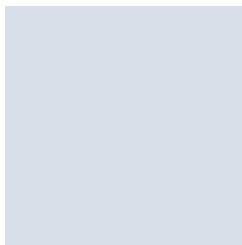

[\[ii\]](#) The supported Cameras by current Camera Remote API are not included in compatible cameras' line-up for Camera Remote SDK

[\[iii\]](#) Refer to the Camera Remote API site for details – <https://developer.sony.com/develop/cameras/get-started>

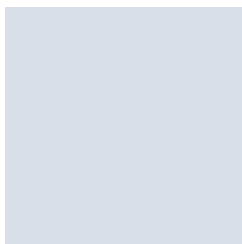

About Sony Corporation

Sony Corporation is a creative entertainment company with a solid foundation of technology. From game and network services to music, pictures, electronics, semiconductors and financial services - Sony's purpose is to fill the world with emotion through the power of creativity and technology.
